

Service out of this world.

Support is an integral part of your corporate availability. That's why we staff our support line with knowledgeable programmers who get to the root of your problem quickly. We offer support in two different ways:

1. 45 day no-charge technical support
2. Software maintenance, with unlimited support via telephone and email—plus one year of upgrade protection for your software. Billed annually—at a rate of 15% of the selling price of our software.

File transfers the way they ought to be—Quick, easy, and fun

QFTP® is a unique tool that simplifies the transfer of files to and from host computers using the Internet's file transfer protocol (FTP). Using a graphical interface that is built upon Microsoft's Windows Explorer standard, QFTP users can quickly, easily and accurately transfer files using simple drag-and-drop or cut-and-paste techniques.

Transfer your selected files automatically while you sleep

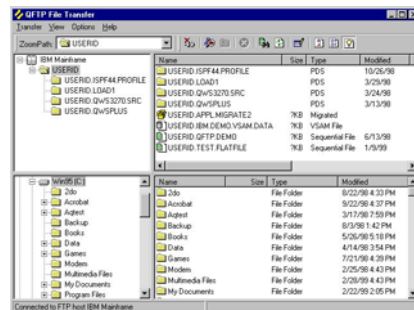

QFTP File Transfer includes our QFTP Scheduling application which lets you schedule file transfer queues for transfer during times when you are not using your computer. Great for taking advantage of cheaper rates for dial-up access during off-hours, or for simply automating repeated transfers so you don't have to remember. Schedule transfers daily, weekly, or monthly at any time.

Create your transfer queues to schedule transfers. The queue can be executed from within QFTP or it can be scheduled to execute at a later time using the QFTP Scheduling Application.

The QFTP Scheduling Application runs in the system tray to control the scheduling of transfer queues.
